## How to migrate an internal website automatically at Hostinger?

Updated 2 weeks ago

### ! IMPORTANT NOTES !

- This procedure doesn't apply for websites created with Hostinger Website Builder: moving builder-based sites between Hostinger accounts is not yet available.
- The steps below are meant for WordPress-based websites

#### How Does It Work?

- This option is currently available for migration to web and Cloud Hosting plans
- The migration will move files, database, and content to the destination hosting plan, excluding emails and DNS zone records.
- The website will first be migrated to a temporary domain on the destination hosting plan. After the migration, DNS records will need to be manually connected.
- Subdomain files stored under the /public\_html folder will be migrated automatically.

! The emails and DNS zone records will not transfer automatically. You can move the [email data](#) and copy your DNS Zone Records, and save it as a separate process.

#### Requirements

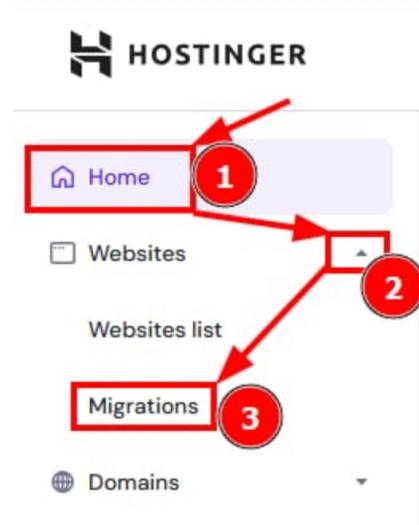

- To migrate your website to another hosting plan, it must meet these criteria:
- Created using [WordPress](#); transfer of websites using other CMS or the Hostinger Website Builder is not supported.
- Active status – the website must not be suspended for any reason. The original hosting plan has at least **7 days or more** before its expiration date.
- There are no ongoing migration requests for the website.
- The website should not be deleted during the migration process.
- Internal migration costs \$29 USD per website.

## Option 1 – Migrating your website between hosting plans in the same Hostinger account

### Step 1 – Initiate the internal migration

Use either of the following methods to reach the migration form:

- Click [Home](#) → click the drop-down under the [Websites](#) section and click [Migrations](#):

- Select the destination hosting plan → [Use login details](#) and click [Next](#):

Choose how you want to migrate your website

Use login details [How it works](#)  
Provide a website URL and admin login details to migrate a site that's currently online.

Upload backup files [How it works](#)  
Migrate your website by uploading your backup and database files.

Next →

### Step 2 – Submit the request

- Select the name of the website you'd like to migrate. Complete the payment by clicking on **Next**.

Enter the URL of the website you want to migrate [How it works](#)

Website URL

Migrate your website from another Hostinger account for US\$ 29.00

### Step 3 – Connecting the website

The website will be migrated to a temporary domain in the destination hosting plan within **4 hours**. To connect the temporary domain to the hosting plan, you will need to go to [Websites](#) and:

- Check that the website is working correctly from the temporary subdomain.
- Delete the website from the origin hosting plan ([How to?](#)). **Important:** If you use an email service, make sure to [back up your emails](#) before deleting the website. ([How to?](#))
- Click [Connect domain](#) and select the website you'd like to connect.
- Import your emails to the receiving hosting plan ([How to?](#))

Premium Web Hosting

Current domain is temporary. [Connect domain](#)

## Option 2 – Migrating your website between hosting plans in a different Hostinger account

### Step 1 – Initiate the internal migration

- Click **Home** → click the drop-down under the [Websites](#) section click on Website list

Home

Websites

Websites list

WordPress Add-ons

Migrations

- Choose the website you want to migrate, press the three dots → Transfer website

Transfer website

Add to favorites

Add tag

**Transfer website**

Add to archive

Change domain

## Step 2 – Submit the request

- Enter the recipient's email address, proceed with payment, and click **Continue**

### Transfer website

Transferring will create a clone of the website for the recipient. Please ensure the recipient has a Hostinger account.

Enter the recipient's email

Internal website transfer within Hostinger - US\$ 29.00

Cancel Continue

## Step 3 – Accepting the transfer

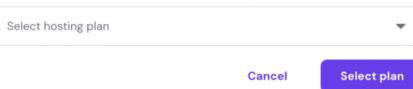

- Confirmation email will be sent to the destination account. The destination account owner has to accept the transfer request by clicking on the confirmation email. Another option is to accept ownership transfer via hPanel. Keep in mind that the request is only valid for 7 days.

- Select destination hosting plan.

### Select a Hosting Plan

Select to which hosting plan you would like to add a new website

Select hosting plan

Select plan

## Step 4 – Connecting the domain

The website will be migrated to a temporary domain in the destination hosting account within **4 hours**. To connect the temporary domain to the hosting plan, you will need:

- Check that the website is working correctly from the temporary subdomain.
- Delete a website from the destination hosting account first. [How to?](#) **Important:** If you use an email service, make sure to **back up your emails** before deleting the website. ([How to?](#))
- Click the **Connect domain** on the receiving account and select the website you'd like to connect.
- Import your emails into the receiving account ([How to?](#))
